And it’s working
COVID-19 has demonstrated how reliant the economy is on truck transportation and freight – particularly with the growth of online retail. That’s why CO agencies and motor carriers are working together to develop a comprehensive clean trucking strategy that considers how to advance, and pay for, factors including:

- Accelerating fleet turnover for conventional and ZEV trucks
- Incorporating clean fueling technology into key freight corridors
- Exploring potential adoption of Advanced Clean Truck Standards
- Exploring emissions reduction for Last Mile Delivery and Pickup
- Assisting truck dealerships and private maintenance shops to support workforce development and ZEV implementation
- Encouraging private fleets to join the EPA’s voluntary SmartWay program
- Leading by example through green procurement
Clean Transportation Collaboration in Colorado

• Initial agency partnerships formed through development of infrastructure grant programs and funding strategies

• Led to agency collaboration on Colorado EV Plan and VW Beneficiary Mitigation Plan

• Coordination on ZEV Standard that included unprecedented industry participation and formation of a Medium/Heavy Duty ZEV Working Group with the Colorado Motor Carriers Association

• Cross-functional roles at CDOT, CEO, Department of Public Health and Environment allow for additional coordination on clean transportation priorities
Thank you
